

The Evolving Customer Experience: Perspectives From the Industry

Consumers have a desire to exert control in all aspects of their shopping journey—whether that’s being more selective in the creators they go to for inspiration or having a say in what data they share in exchange for personalization.

This power shift means that the future of customer experience will be driven not by the brand, but by a customer empowered in their choices. We’ve uncovered three themes that will be key to building an optimal experience for tomorrow’s shoppers.

UK

FACEBOOK IQ

01 The Customer-Curated Storefront

HOW DIGITALLY EMPOWERED SHOPPERS ARE CRAFTING THEIR OPTIMAL EXPERIENCE

“There is no going back to normal in the global environment today. Consumer expectations are very different from what they used to be before the COVID-19-pandemic, partly because the amount of digital research and transactions has increased disproportionately.”

—Ankit Mehta,
Personalization, Data & Analytics Lead, Accenture

of online shoppers surveyed in the UK say their mobile device is quickly becoming their most important shopping tool¹

of online shoppers surveyed in the UK say they purchase products because they happen to come across them unexpectedly while browsing¹

What does this mean for the future of customer experience?

Consumers will be looking for humanized shopping experiences, even while shopping digitally. Tools that bring humanity to the shopping process will help consumers forge closer links with brands. Whether it's through conversational or discovery commerce, brands have the opportunity to add a human, personalized touch to their customer experience.

02 The New Value Equation

PERSONALIZATION AND RELEVANCE IN THE NEXT ERA OF ADVERTISING

“People’s perceptions of how data is used will hopefully improve, but only if our industry resolves to make progress. That means committing to a future in which we have access to less data and in which data use becomes more intuitive and easy to understand.”

—Graham Mudd,

VP, Product Marketing, Ads, Facebook

of online shoppers surveyed in the UK feel more personally connected to brands that offer personalized content or deals¹

3.8x

Shoppers in the UK are 3.8 times more likely to share data when made aware of the personalized benefits it enables²

What does this mean for the future of customer experience?

People will want the best of both worlds when it comes to privacy and personalization. Brands can exceed expectations with privacy-enhancing technology that can deliver on the demand for more choice. Providing tailored experiences based on geography or contextual placements is a great starting point to building more sophisticated use cases.

03 Creator Culture

HELPING PEOPLE FIND PRODUCTS, HELPING PRODUCTS FIND PEOPLE

“Creator culture gives brands the opportunity to do truly inclusive marketing at scale by empowering brands to truly represent all of their customers. It can help shape our cultures for the better by eliminating harmful bias and stereotypes.”

—Sophie Neary,

Group Director for Auto, CPG & Entertainment, UK & Ireland, Facebook

of consumers surveyed in the UK get ideas on which products to shop for from celebrities and creators¹

of online shoppers surveyed in the UK would buy products directly from live videos when brands and creators launch new products¹

What does this mean for the future of customer experience?

As consumers come to expect more interactive and engaging shopping experiences, they will seek out even closer connections with creators. Live immersive experiences between shoppers and creators can break new ground in connecting brands with their audiences. Looking ahead, augmented and virtual reality experiences with creators could pave the way for product discovery.
